

# CUVANE

*Under pressure, we make diamonds.*

Parent Company Launch Runbook · Shoestring Edition v1.0 · Cuvane.com / Cuvane.ai / Cuvane.io

## What We Are Building

Cuvane is a parent company that creates AI-native businesses. One vessel, many facets — each venture is raw material Cuvane transforms into something precious, the way pressure turns coal into diamond.

| Venture         | What it is                                        |
|-----------------|---------------------------------------------------|
| Jarvis          | AI company operating system / executive assistant |
| FreedomCRM      | Business and real estate CRM                      |
| DriveHelp       | Driver assistant application                      |
| PersonalAI      | Personal intelligence and memory layer            |
| Future products | New carbon, same vessel                           |

## The Plan at a Glance

| Step | What                               | Cost     | Time    |
|------|------------------------------------|----------|---------|
| 1    | Buy domains (.com .ai .io)         | ~\$110   | 15 min  |
| 2    | Claim GitHub org + npm scope       | \$0      | 5 min   |
| 3    | Email on the domain (free-first)   | \$0      | 30 min  |
| 4    | Website on free hosting            | \$0      | 1–2 hrs |
| 5    | Trademark (self-filed, deferrable) | ~\$250   | 1 hr    |
| 6    | Legal entity (shoestring path)     | \$0–\$99 | 1–2 hrs |
| 7    | Google Workspace (when ready)      | \$6/mo   | 15 min  |

**Total shoestring launch: ~\$110–\$460.** Everything else is sweat equity.

## Step 1 — Buy the Domains (non-negotiable)

Do this first. The name is the asset; every step after depends on owning it.

- Go to Porkbun (cheapest for .ai, all TLDs in one account) or Namecheap.
- Buy all three: `cuvane.com` (~\$10), `cuvane.ai` (~\$60–80), `cuvane.io` (~\$40–50).
- Enable auto-renew and WHOIS privacy (free at Porkbun).
- Register in your personal name now; transfer to the company after the legal entity exists (Step 6).

Why all three? `.com` is trust and long-term value. `.ai` is your industry's TLD. `.io` is the developer/startup TLD. Owning the set keeps the name out of squatters' hands and gives every future product a home.

## Step 2 — Claim Developer Identity (free)

- GitHub organization: `github.com/organizations/new` → name: `cuvane`.
- npm scope: `npmjs.com/settings/scopes` → create `@cuvane`.
- Social handles: `@cuvane` on X and `linkedin.com/company/cuvane`.

Free and takes five minutes. Squatters take these daily — do not wait.

### Step 3 — Email (free-first)

Professional email on your own domain, without paying yet.

- Zoho Mail Free Plan — up to 5 users, custom domain, webmail + mobile app, send and receive from @cuvane.com. \$0.
- Mailboxes: michael@cuvane.com, hello@cuvane.com, engineering@, growth@, support@. Skip ceo@ and jarvis@ — keep it human.
- Paid (when ready): Google Workspace Business Starter — \$6/user/mo. Full Gmail, Calendar, Drive, Meet on the domain.

### Step 4 — Website (free)

- Build a one-page site on cuvane.com — tagline, the four products, contact. Plain HTML/CSS is enough.
- Host on GitHub Pages or Cloudflare Pages (both free).
- Point the domain's DNS (CNAME for the .com) at the host.
- Add SSL — automatic and free on both platforms.

### Step 5 — Trademark (deferrable, self-filed)

You already own the name through first use (common law) once the site is live. Federal registration makes it enforceable nationwide.

- File yourself at [tmsearch.uspto.gov](https://tmsearch.uspto.gov) (Trademark Center), standard character mark, CUVANE.
- Start with Class 42 (SaaS/AI services) — \$250 via TEAS Plus. Add Class 9 (software) and Class 35 (business services) later, same cost each.
- Specimen: screenshot of the Cuvane homepage with the logo beside a service description.

Budget move: if cash is tight this month, launch first and file the trademark in the same month as your first revenue.

### Step 6 — Legal Entity (shoestring path)

You do not need a \$500 Delaware C-Corp to start. Pick the cheapest path that lets you operate legally and own the brand.

- Option A — Existing LLC (\$0): operate the brand under your current entity, register Cuvane as a trademark/trade name, file the trademark in its name.
- Option B — Bizee LLC (~\$0–\$99): free formation tier — pay only your state's filing fee; first year registered agent included.
- Option C — Delaware C-Corp (~\$500+): only when raising outside capital or needing investor-grade structure.
- Don't forget: file the BOIR (Beneficial Ownership Information) at [fincen.gov](https://fincen.gov) — free, required.

### Step 7 — Google Workspace (when ready)

Once revenue covers it, move email to Google Workspace Business Starter (\$6/user/mo): real Gmail + Drive on @cuvane.com, shared calendars across the ventures. Keep the free Zoho setup until then.

## Budget

### Shoestring (launch now)

| Item                                  | Cost         |
|---------------------------------------|--------------|
| Domains × 3                           | ~\$110       |
| GitHub + npm                          | \$0          |
| Zoho email                            | \$0          |
| GitHub / Cloudflare Pages             | \$0          |
| Trademark (Class 42, self-filed)      | ~\$250       |
| Entity (reuse LLC or Bizee free tier) | \$0–\$99     |
| TOTAL                                 | ~\$110–\$460 |

### Full build (later, when revenue allows)

| Item                                 | Cost      |
|--------------------------------------|-----------|
| Google Workspace                     | \$6/mo    |
| Delaware C-Corp                      | ~\$500    |
| Trademark, all 3 classes             | ~\$750    |
| Premium brand assets / legal counsel | as needed |

## Checklists

### Buy today (30 min, ~\$110)

- [ ] Buy cuvane.com, cuvane.ai, cuvane.io (Porkbun)
- [ ] Enable auto-renew + WHOIS privacy
- [ ] Create GitHub org cuvane
- [ ] Create npm scope @cuvane
- [ ] Save logins/passwords in the credential tracker

### Week 1 (free)

- [ ] Zoho Mail free plan with michael@, hello@, engineering@, growth@, support@
- [ ] One-page Cuvane website, live on GitHub Pages
- [ ] Custom domain + SSL pointing at the site
- [ ] Grab @cuvane handles on X and LinkedIn

### First revenue month

- [ ] File CUVANE trademark, Class 42 (USPTO, \$250)
- [ ] Rebrand operating entity under Cuvane (or form LLC via Bizee free tier)
- [ ] File BOIR at FinCEN (free)
- [ ] Open a dedicated bank account for the business

### Later

- [] Google Workspace (\$6/mo)
- [] Delaware C-Corp + domain transfer to the entity
- [] Trademark Classes 9 and 35
- [] Launch Jarvis as the first venture

## Account & Credential Tracker

Keep this in a password manager. Never commit credentials to a repo.

| Service                   | Account | Username/Email | Cost     | Notes            |
|---------------------------|---------|----------------|----------|------------------|
| Porkbun                   |         |                | \$110/yr | domains + DNS    |
| GitHub                    |         |                | \$0      | org: cuvane      |
| npm                       |         |                | \$0      | scope: @cuvane   |
| Zoho Mail                 |         |                | \$0      | 5 free mailboxes |
| GitHub Pages / Cloudflare |         |                | \$0      | website          |
| USPTO                     |         |                | \$250    | trademark        |
| Bizee / State             |         |                | \$0–\$99 | entity           |
| FinCEN BOIR               |         |                | \$0      | required         |
| X / LinkedIn              |         |                | \$0      | handles          |

---

*Cuvane — the vessel where raw companies become precious ones. Coal goes in. Diamonds come out.*
